DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of claims 1-10 in Paper No. 4 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 and 4-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Takasu (5,326,991).

Takasu teaches in figure 7 a lateral MOSFET comprising a 3C (column 3, line 67) SiC layer 22 (column 4, lines 54-55) located over a buried oxide layer 20 in a silicon substrate, a gate 32 formed on the SiC layer and N type source and drain regions located in the SiC layer, within a P type tub, and laterally offset from the gate, wherein the breakdown voltage of SiC layer is greater than that of a silicon.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-2, 4-9 and 3, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takasu.

Takasu teaches substantially the entire claimed structure, as applied to claim 1 above, except using the MOSFET as a power switch employed in a power train of a power converter.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use the MOSFET structure of Takasu as a power switch employed in a power train of a power converter in order to the device to a particular application. Furthermore, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

Regarding claim 3, it is known in the art that a SiC layer has a breakdown voltage of 10 volts, of which judicial notice may be taken.

Papers related to this application may be submitted to Technology center (TC) 2800 by facsimile transmission. Papers should be faxed to TC 2800 via the TC 2800 Fax center located in Crystal Plaza 4, room 4-C23. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 2811 Fax Center number is (703) 308-7722 and 308-7724. The Group 2811 Fax Center is to be used only for papers related to Group 2811 applications.
